Education

| | | |
|---------------------------|--|----------------|
| 2023 – 2026 (Expected) | Boston University Questrom School of Business <i>Doctoral Candidate in Information Systems</i> Advisor: Dokyun “DK” Lee | Boston, MA |
| 2021 – 2023 | Washington University in St. Louis Olin Business School <i>Master of Science in Business Administration</i> | St. Louis, MO |
| 2019 – 2021 | Carnegie Mellon University Tepper School of Business <i>Master of Business Administration</i> Business Analytics Track Concentrations in Business Technologies and Operations Research | Pittsburgh, PA |
| 2014 – 2018 | Washington University in St. Louis Olin Business School <i>Bachelor of Science in Business Administration</i> Majors in Marketing and Finance | St. Louis, MO |

Research Interests

| | |
|--------------------|---|
| Substantive | Societal consequences of generative AI Human creativity and creative markets in response to AI Multi-agent systems to simulate social processes Design and analysis of human-AI interfaces in healthcare |
| Methods | Deep Learning Computer vision Large Language Models Multimodal feature extraction Causal inference |

Research

Publications

- Eric B. Zhou;** Dokyun Lee. “Generative Artificial Intelligence, Human Creativity, and Art.”
Published at Proceedings of the National Academy of Sciences Nexus (March 2024)
Available at [[SSRN](#)] and [[PNAS Nexus](#)].
“Recent artificial intelligence (AI) tools have demonstrated their ability to produce outputs traditionally considered creative. One such system is text-to-image generative AI, which automates humans' execution to generate high-quality digital artworks. Utilizing a dataset of over 4 million artworks from more than 50,000 unique users, our research shows that text-to-image AI substantially enhances human creative productivity by 25% and increases the likelihood of receiving a favorite per view by a similar percentage. While peak artwork content novelty (focal objects and object relationships) increases over time, average content novelty declines, suggesting an expanding but inefficient creative space. Additionally, there is a consistent reduction in visual novelty (pixel-level stylistic elements). Importantly, AI-assisted artists who can produce more novel ideas, regardless of overall novelty prior to adoption, produce artworks that their peers evaluate more favorably. The results imply that ideation and likely filtering are necessary skills in the text-to-image process, thus giving rise

to “generative synesthesia” - the harmonious blending of human senses and AI mechanics to discover new creative workflow.”

Under Review

1. **Eric B. Zhou**; Dokyun Lee; Bin Gu. “Who Expands the Human Creative Frontier with Generative AI?” (Nov. 2024)
“We investigate how artists’ adoption of text-to-image generative AI impacts their ability to contribute novel and unforeseen ideas. While these tools do not directly generate novel ideas, their rapid execution capabilities enhance artists’ exploration and idea selection, improving the ideation process. Using large-scale data from an art platform with known AI adopters, we analyze this influence at both individual and aggregate levels. Our findings reveal that AI initially fosters higher novelty among a concentrated group of creators, while their novel contribution frequency is comparable to non-AI-assisted peers. Over time, a more diverse group emerges, contributing higher novelty ideas at an accelerated rate, particularly following the release of open-source Stable Diffusion. We hypothesize that creators leverage community-driven tools to gain greater control, refining concepts to produce novel contributions.”

Workshop on Information Systems and Economics (WISE) 2022 Best Student Paper Finalist
“In online marketplaces, sellers can rely on alternative mechanisms to signal their quality when they lack rich transaction histories. Using scraped data on GPU sales from eBay, we find that certain image signals can substitute for reputation to increase conversion rates amongst sellers with less than 100% positive reputation, and conditional on making a sale, can realize a 5% price premium on average. However, the effects are only significant for less reputable sellers.”

Invited Talks
